

TECHNICAL DATA SHEET

Receiver required: **XDS for Cumulus**

Satellite: **AMC-8 (139 degrees)**

Network/Program: **CD- Car Doctor Show**

Cues/Relays: **Liner-P32 | Network Break Start – P33 | Local Break Start – P34**

Technical number for The Car Doctor Show: **845-418-5065**

Receiver Questions/Issues: Cumulus – **212-456-5000 option #4**

NOTES:

- You **MUST** reprogram your XDS receiver for the new Car Doctor Show feeds – both the network/show name, and the relay closures.
- Please note that the Car Doctor Show clock has been updated. We have removed the 10 second bumper position from the end of each break – you may wish to lay a 5 second voice only liner over the return bumper music, which will start one second after the break ends.
- Relays are intended to be used as follows:
 - **LINER (P32)** – This will fire a dry voice liner over a music bed going into each commercial break. **THIS SHOULD NOT MUTE THE NETWORK.**
 - **NETWORK BREAK START (P33)** – This relay is intended to break your Internet stream away at the start of a network break. Note that it will only be fired at a beginning of the network breaks. Do not expect to see this cue for the local positions.
 - **LOCAL BREAK START (P34)** – This relay will fire your local commercial breaks. You may also use it to break away your Internet stream during local breaks.
- Note that there is **ONLY ONE FEED** of the Car Doctor Show. **THERE WILL NOT BE A REFEED.** The National live feed will be from 2:06:40 PM Eastern time to 2:58:50 PM Eastern time, and from 3:06:40 PM Eastern time to 3:58:50 PM Eastern time. If you air the program at any other time, you need to set your XDS receiver to delay broadcast the program. The receiver will record the program and play it back, with cues, at the time you program. Your automation system will react to this recording the same as it would to the live feed.
- Please use the numbers given above if you have questions about the program or the feed.
